

## Cloud Backup and Disaster Recovery Solutions

### What is a backup solution?

A backup system automates the process of backing up your important computer records and transferring them to a secure off-site location.

The backup software is installed on your server or computers, and schedules are set to automatically back them up. This information is transmitted via a secure link using your internet connection to the backup vault.

### What does a backup protect you from?

Ransomware and cryptolocker

Natural disaster

Physical disaster

Theft

Human error

Computer virus

Hardware failure

Accidental loss

### About us and our backup service:

StorageVault is a Cloud Backup service from Rapidweb Networks that provides Fast and Secure Cloud backup.

Our cloud backup system automates the process of backing up your important computer records and transferring them to a secure off-site location.

The backup software is installed on your server or computers, and schedules are set to automatically back them up. This information is transmitted via a secure link using your internet connection to our backup vault.

## Our secure backup client for:

### Disk Image

Backup entire disks and partitions on Windows systems

### Files & Folders

Photos, Word docs, Adobe files, CAD files, Program output, etc.

### Emails & Calendars

Microsoft Exchange Server, Outlook, Windows Mail and more

### Databases

Microsoft SQL Server, MySQL, MongoDB

### Servers & OS

Windows server system state, Windows System Backup, Application-Aware Writer, Hyper-V

## How secure is our backup?

When our client backs up your data it secures it using AES-256 'military grade' encryption, from then onwards your data is encrypted at all points of the backup journey - from transit to our vault and finally at 'rest' in our storage. The only stage that your information is decrypted is when you need a restore.
